CORE STRENGTHS

- Component-driven UI architecture & reusable design systems
- Performance, Core Web Vitals & accessibility-first markup
- Conversion-oriented layout & UX for local-service business sites
- Interactive 3D / motion on the web with Three.js & WebGL

LANGUAGES

PROFILE

Computer Science & Engineering graduate and **web developer** specialising in complete marketing websites for real home-service businesses. I build fast, responsive, standards-based front-ends in **React, Next.js and TypeScript**, and develop interactive **Three.js and WebGL** interfaces when a project calls for them. I also run my own **lead-generation pipeline** in Python and Airtable, sourcing, enriching and qualifying prospects and tracking outreach to close. A three-month enterprise networking internship and applied machine-learning research add a practical, full-stack view of how software is built and shipped.

EXPERIENCE

Web Developer · Independent / Freelance Mar 2026 - Present Self-directed studio work Remote · Dhaka

Design and build complete, high-converting marketing websites and interactive front-end components for local-service businesses, handling everything from layout and copy to responsive build and deployment.

- Built **complete, responsive websites** for home-service businesses including plumbing, roofing, HVAC and automotive, each focused on speed, clarity and lead conversion.
- Built a reusable **template system** (*beautiful-websites-kit*) with shared design tokens, components and a rapid re-skin workflow that standardises delivery across **18 industry niches**.
- Developed **interactive Three.js and WebGL components** used across these sites, including 3D hero scenes, scroll-driven motion and animated backdrops.
- Implemented practical business features: booking and quote forms, live **Leaflet** service-area maps, before/after image sliders and review sections with structured data.
- Delivered every project through **Git and GitHub**, focusing on **Core Web Vitals**, semantic HTML, accessibility and on-page SEO.

React Next.js TypeScript Three.js Tailwind Node.js Vite

Lead Generation & Outreach · Independent Jun 2026 - Present Self-directed · own prospecting pipeline Remote · Dhaka

Build and run an end-to-end lead-generation system in Python and Airtable, covering sourcing, enrichment, qualification, scoring and tracked outreach.

- Source prospects and scrape listing pages with **Python, Playwright and Apify** actors, with **Apollo.io** used for prospect and contact data, enriching each record with decision-maker name, email, phone, category and public review data.
- Score every lead against a written rubric and store the rationale beside the record, so the ranking is auditable rather than a black box.
- Built the CRM layer on the **Airtable REST and Metadata APIs** — schemas created and migrated in code, with batched writes, rate-limit handling and a verify pass that reconciles every field after each run.
- Track leads through a **staged pipeline** from sourced to contacted to replied, with follow-up dates driving the outreach cadence.

EDUCATION

B.Sc. in Computer Science & Engineering
American International University-
Bangladesh (AIUB)

Faculty of Science & Technology ·
Graduated April 2026

Coursework across software
engineering, data structures &
algorithms, databases, computer
networks, and machine learning.
Capstone research in applied ML
(below).

RESEARCH

Diabetes Prediction for the
Bangladesh Population

Bio-Inspired Optimization of ML
Classifiers on the DiaBD Dataset

Undergraduate Thesis · 2026

Benchmarked **15 classifiers** and built
an imbalance-aware pipeline (SMOTE /
ADASYN / SMOTE-ENN). Tuned
Gradient Boosting, LightGBM and a
soft-voting ensemble with **bio-
inspired optimisers** (Particle Swarm,
Ant Colony and Harris Hawks) for
locally relevant, screening-grade
accuracy.

Python scikit-learn XGBoost
LightGBM

HIGHLIGHTS

- WEB** Complete home-
service websites,
designed & built end
to end
- 18** industry niches covered
by a reusable template
system
- 112** leads enriched, scored
and tracked to close
- 3 mo** enterprise networking
internship at a
national bank
- ML** co-authored applied
research on
Bangladesh-specific
diabetes screening

EXPERIENCE · CONTINUED

IT Network Intern
Trust Bank PLC, IT Division

Dec 2025 - Mar 2026
Dhaka, Bangladesh

Completed a three-month enterprise networking internship within the IT Network Team of a leading national bank, working alongside engineers on live production infrastructure.

- Observed and practised **enterprise WAN architecture** and **VLAN segmentation** across a live, multi-branch banking network.
- Worked with **static and dynamic routing** configuration and **tunnel-interface** management on production routers and switches.
- Used **SSH-based remote access** for device administration and produced structured **network documentation** to team standards.
- Built strong professional discipline around **security, change control and reliability** in a regulated environment.

SELECTED PROJECTS

IRONHAND, Hargrove & Tidewell Plumbing Sites

WEB · REACT

A family of dark, cinematic marketing sites for plumbing businesses. Full conversion layout: sticky call bar, animated hero, service cards, before/after slider, live service-area map, review wall and a multi-step quote form, each re-skinned from a shared component base.

React TypeScript Tailwind Leaflet SEO

Ridgeline Roofing & Salem Auto-Electric

WEB · NEXT.JS

Two production home-service sites extending the studio system into new trades. Focused on fast load, mobile-first layout, structured business data and trust-building sections (reviews, financing, service areas) tuned to book more jobs.

Next.js TypeScript Responsive Core Web Vitals

Interactive WebGL Component Library

3D · THREE.JS

A collection of reusable, GPU-accelerated front-end effects: a rotating digital-globe hero background, particle-text reveals, a circular 3D gallery, scroll-expansion heroes and animated backgrounds, all packaged as drop-in components for marketing pages.

Three.js WebGL GLSL Canvas

beautiful-websites-kit · Template Engine

SYSTEM · REACT + VITE

A design-system-driven starter kit that standardises tokens, layout primitives and section components so a full, distinctive business website can be assembled and re-themed rapidly across 18 industry niches without rebuilding from scratch.

React Vite Design System Component Architecture

Embeddable Site Assistant Widget

JS · ZERO-DEPENDENCY

A lightweight, rule-based chat assistant dropped into client sites to answer visitor questions and guide them toward booking. Ships as a single self-contained script with two modes (a business FAQ mode and a design/portfolio mode) and no external dependencies or API cost.

JavaScript Web Components UX Copywriting

WHAT I BRING

I ship complete products, not just screens. I'm comfortable owning a site from first layout through responsive build, animation, performance tuning and deployment. My networking internship and ML research mean I read across the stack: I understand how the front end connects to real infrastructure and data, and I care about correctness, speed and maintainability as much as visual polish. I also bring the commercial side: finding the businesses worth talking to, qualifying them, and running the outreach that turns a list into booked work. I work independently, learn quickly and document what I build.
